Note: The Atlanta Fed GDPNow estimate is a model-based projection not subject to judgmental adjustments. It is not an official forecast of the Atlanta Fed, its president, the Federal Reserve System, or the Federal Open Market Committee.
GDPNow is not an official forecast of the Atlanta Fed. Rather, it is best viewed as a running estimate of real GDP growth based on available economic data for the current measured quarter. There are no subjective adjustments made to GDPNow—the estimate is based solely on the mathematical results of the model.

Note: The first two rows are published BEA estimates for the most recent two quarters. Rows including and below row three are GDPNow forecasts. CIPI is “change in private inventories.” Changes in net exports and CIPI are both in billions of 2017 dollars (SAAR). All other numbers are quarterly percent changes (SAAR). The table does not necessarily include all estimates for the quarter; see tab “TrackingHistory” in the online Excel file for the entire history.
